APACH CN-70E2 RE-DESIGNED

Apach has recently updated the parts for the CN-70E2 Coil Nailers.

The CN-70E2 has been the premier tool in the Apach line for almost a decade. We are pleased to announce that the tool has gone through some changes to keep it at the top.

The materials in the Driver Blade and Piston Assembly have been upgraded, yielding a more durable product. We ensure that you will get more shots out of the new blades and experience less breakage.

The Bumpers have also been upgraded to a more durable material. These changes will allow users to have more time between services, meaning less down time.

The CN-70E2 is a great option for machine mounting. We now offer the High Flow Valve, Head Gasket and Remote Fire Trigger Assembly to mount these tools on the jig.

Parts needed to machine mount:

- High Flow Valve - 23312302
- Head Gasket - 23300901
- Remote Trigger - 23303805A
